

# T3C1H-003

Mechanical Friction Torque Limiter  
IEC Frame 90, B5 Flange

Designed for brief overloads.  
Does not automatically disconnect.

NOT suitable for pulley output

### Engagement/Disengagement

Spring/None

### Facing Type

Low Coefficient

### Factory Torque Setting +/-10%

105 Pound Inches

### Maximum RPM

1,750

### Input Bore/Output Shaft

24mm [0.945 inches]

### Finish

Aluminum

### Open or Enclosed Construction

Enclosed

### Shipping Weight

13 Pounds

### TORQUE vs. SPRING PRESSURE

### NEW vs. BURNISHED TORQUE

The torque output setting of a friction torque limiter is set at the factory or in the field when new. (All torque settings are +/- 10%.) Repeated overload will burnish the friction surfaces and may increase the slip torque setting. The torque setting should be tested after prolonged or frequent overload and re-set if needed.

### PRODUCT SELECTION

Torque capacity is only one factor to consider when making a product selection. Ensure that you will have the right product for the job by contacting our engineering department for application review and selection assistance.

### PARTS KITS

The *Repair Kit* contains common wear items for this product. Users are encouraged to stock one or more repair kits considering the number of units installed and the potential downtime if machinery on which the unit is installed is critical equipment. To obtain current pricing and lead time for parts kits, contact customer service.
