Air Engaged Friction Brake  
Flange Mount

## Engagement/Disengagement

Air/Spring

## Facing Type

High Coefficient

## Torque @ 80 PSI – Dynamic

100 Pound Inches

## Minimum Engagement Pressure

3.5 PSI

## Maximum Operating Pressure

80 PSI

## Maximum RPM

1,750

## Bore Range with Standard Keyway

0.313 (7) to 0.500 (12) Inches (mm)

## Air Volume New

0.07 Cubic Inches

## Air Volume Worn

0.17 Cubic Inches

## Finish

Aluminum

## Open or Enclosed Construction

Open

## Mounting Bolt Circle

2.938 Inches

## Shipping Weight

1 Pounds

## TORQUE vs. AIR PRESSURE

## NEW vs. BURNISHED TORQUE

The torque output of a new friction brake or clutch can be up to 40% less than the published torque rating. To achieve full design torque, a unit must be cycled under load to burnish the friction surfaces. The exact number of cycles varies by application.

When calculating required torque always use a safety factor of 1.5 to 2. It is not recommended to select a product for use at its maximum rated torque for continuous duty.

## PRODUCT SELECTION

Torque capacity is only one factor to consider when making a product selection. Ensure that you will have the right product for the job by contacting our engineering department for application review and selection assistance.

### PARTS KITS

The *Repair Kit* contains common wear items for this product. Users are encouraged to stock one or more repair kits considering the number of units installed and the potential downtime if machinery on which the unit is installed is critical equipment. To obtain current pricing and lead time for parts kits, contact customer service.
